descendant selector ✓

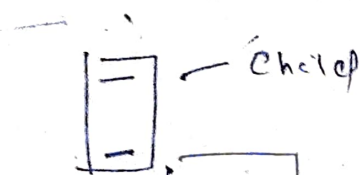

ul li a {

— spacespace

}

child selector →

direct children

grandchild

ul > li {

}

ul

li

li

li

li

li

direct child

list-style: none;

list-style: none;

Sibling Selector →

h1 + p {

}

all p which is immediate sibling (+)

h1

p

p

ol

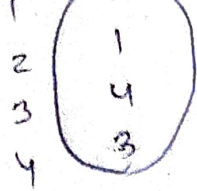

h1

p

p

will be changed

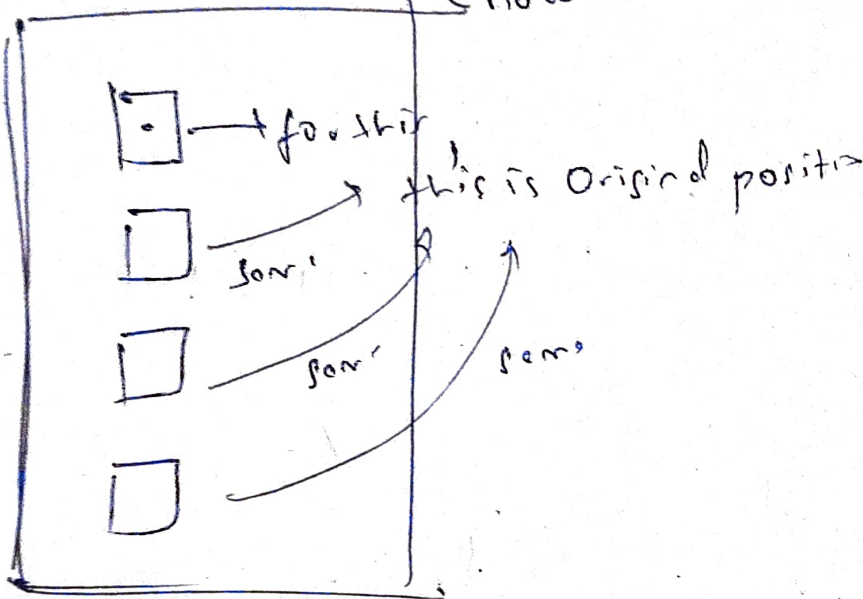

absolute & relative:

top, left, right, left

position: relative; — relative to original position

(now allowed to move

← treat html
parent
parent
absolute
work based
on parent
element
no its self

To set as parent...
we need to
set it as
display: relative;
